

Organic Admissions and Discharges

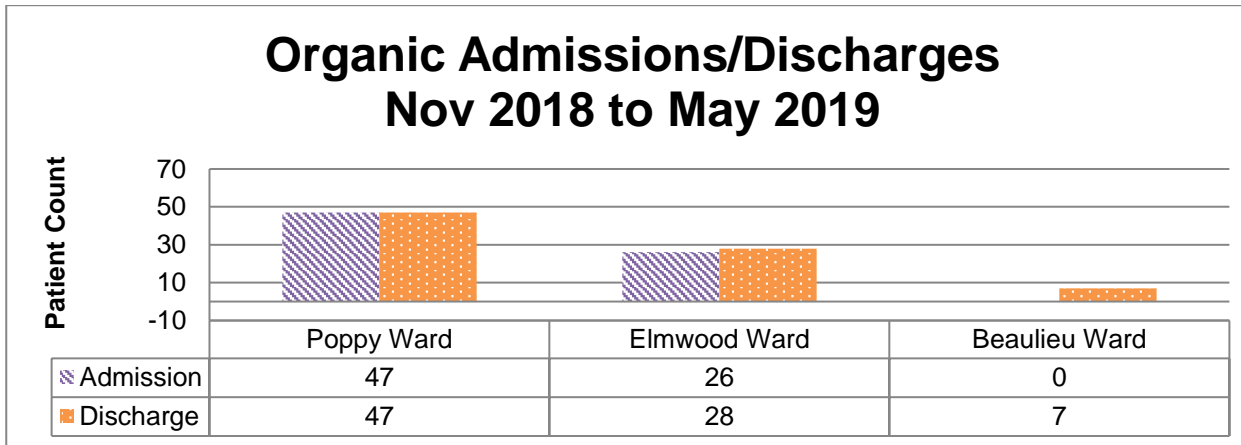

The figures shown are a WHOLE COUNT of individual patients ADMITTED during the time frame and a WHOLE COUNT of individual patients DISCHARGED during the time frame (the two figures do not relate).

Elmwood ward demonstrated lower admissions at times due to the acuity & dependency on the ward.

During a temporary change of management mid-way through the year, Beaulieu Wards discharge process was enhanced.

12 months – all 3 Organic Wards operational

During Nov 18-May 19 there have been occasions when Elmwood Ward have experienced a high number of acute patients requiring an enhanced level of care which has necessitated new admissions being admitted to Poppy Ward. Poppy Ward has maintained consistent flow despite experiencing DToCs.

7 months – post Beaulieu closure
